Purpose of the Report

The purpose of this report is to identify and classify the information assets of the real estate agency, in order to assess their level of risk exposure and establish appropriate protection measures. This stage is essential within the IT security audit process.

Description of the Technology Infrastructure

The real estate agency has the following infrastructure:

- **Internal LAN** that connects all the devices.
- **Central server** that manages the database, shared files and internal services.

- **10 workstations** distributed across the office, used by the administrative and sales staff.

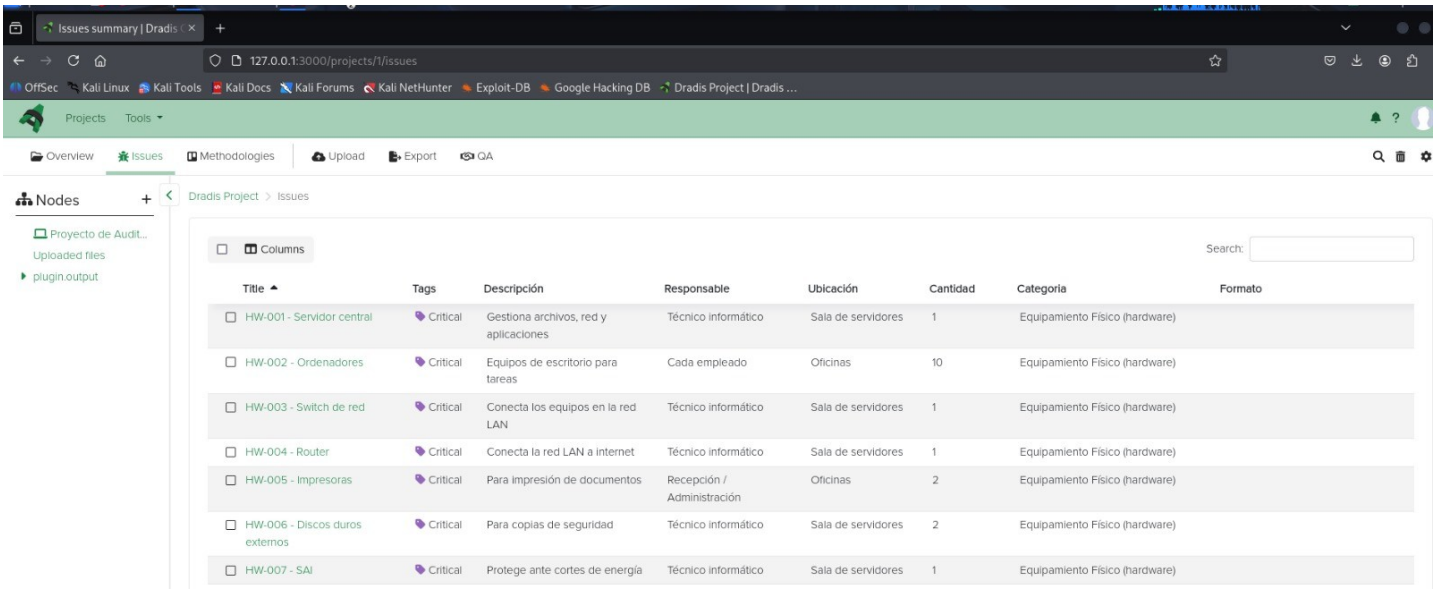

Identification of Information Assets

Physical Equipment Inventory

This section details the physical devices that are part of the real estate agency's IT infrastructure. Each asset has been assigned a unique code to make tracking and management easier.

Code	Asset name	Description	Responsible	Location	Quantity
HW-001	Central server	Manages files, network and applications	IT technician	Server room	1
HW-002	Computers	Desktop computers for daily work	Each employee	Offices	10
HW-003	Network switch	Connects the computers to the LAN	IT technician	Server room	1
HW-004	Router	Connects the LAN to the internet	IT technician	Server room	1

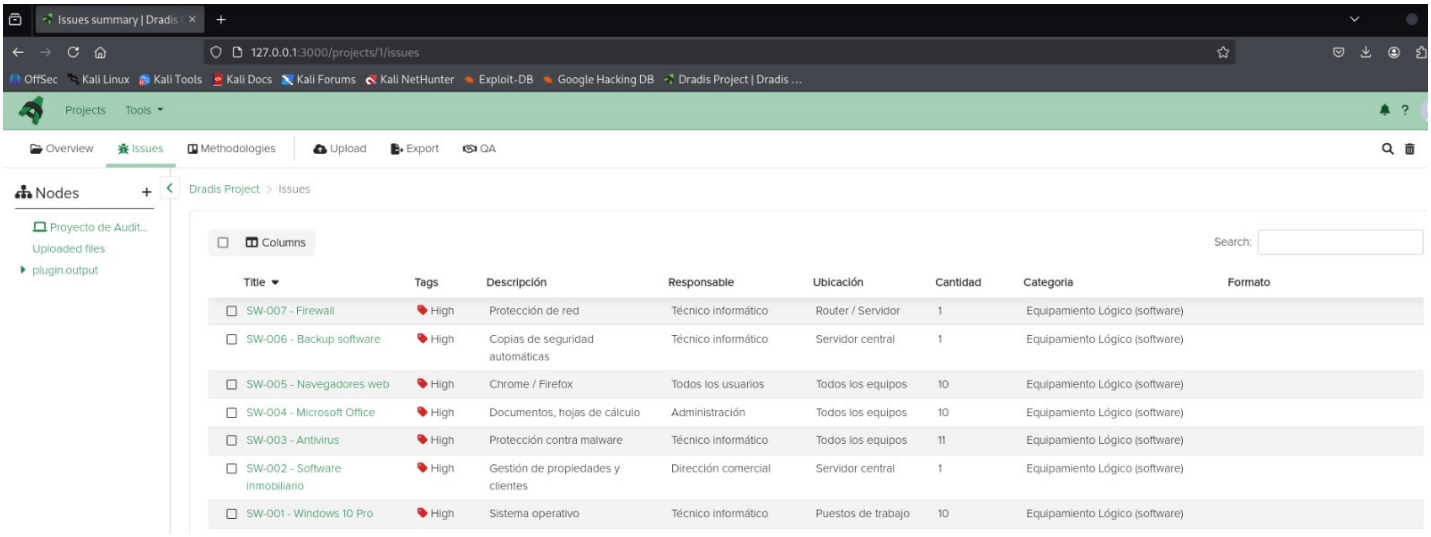

Code	Asset name	Description	Responsible	Location	Quantity
HW-005	Printers	For printing documents	Reception / Administration	Offices	2
HW-006	External hard drives	For backups	IT technician	Server room	2
HW-007	UPS	Protects against power outages	IT technician	Server room	1

Logical Equipment Inventory

This section includes the programs, operating systems and applications used by the company for its daily operations.

Code	Asset name	Description	Responsible	Location	Quantity
SW-001	Windows 10 Pro	Operating system	IT technician	Workstations	10
SW-002	Real estate software	Property and client management	Sales management	Central server	1
SW-003	Antivirus	Malware protection	IT technician	All devices	11
SW-004	Microsoft Office	Documents, spreadsheets	Administration	All devices	10
SW-005	Web browsers	Chrome / Firefox	All users	All devices	10
SW-006	Backup software	Automatic backups	IT technician	Central server	1
SW-007	Firewall	Network protection	IT technician	Router / Server	1

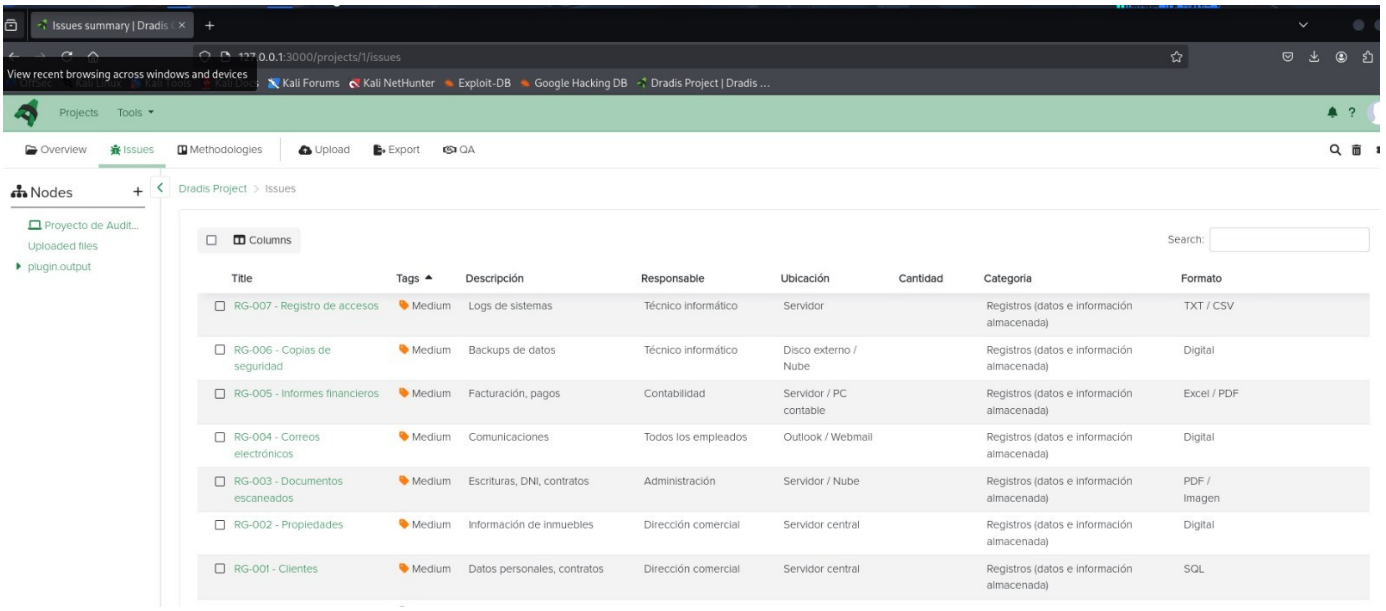

Records Inventory

This section identifies the data and information handled by the company, both in digital format and in databases.

Code	Record name	Description	Responsible	Location	Format
RG-001	Clients	Personal data, contracts	Sales management	Central server	SQL
RG-002	Properties	Property information	Sales management	Central server	Digital
RG-003	Scanned documents	Title deeds, ID documents (DNI), contracts	Administration	Server / Cloud	PDF / Image

Code	Record name	Description	Responsible	Location	Format
RG-004	Emails	Communications	All employees	Outlook / Webmail	Digital
RG-005	Financial reports	Invoicing, payments	Accounting	Server / Accounting PC	Excel / PDF
RG-006	Backups	Data backups	IT technician	External drive / Cloud	Digital
RG-007	Access log	System logs	IT technician	Server	TXT / CSV

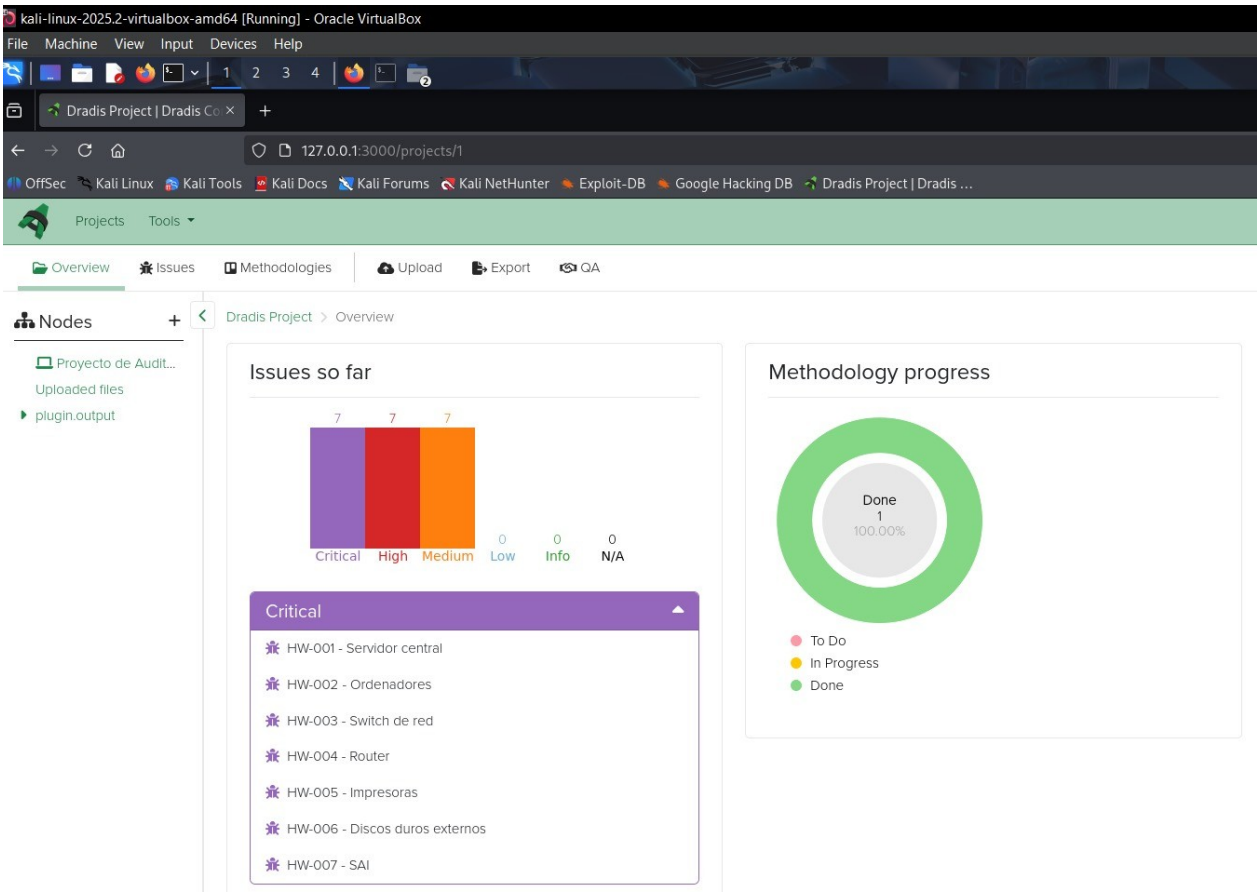

Identification Methodology

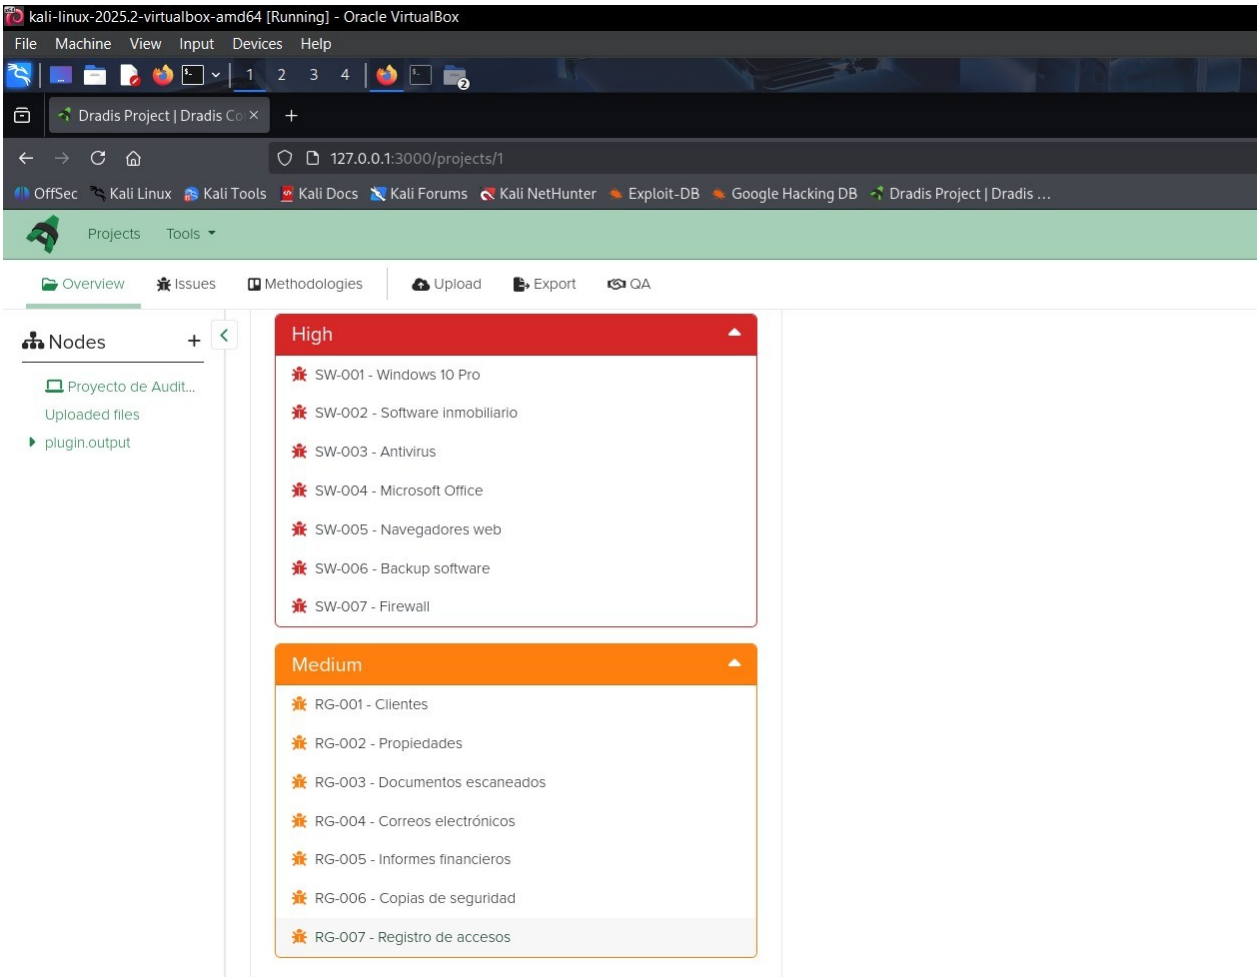

The identification was carried out through:

- Physical review of the infrastructure.
- Interviews with the staff.
- Analysis of internal documentation.
- Use of **Dradis Framework**

Evidence

Screenshots taken from Dradis Framework are attached, showing the "issues" created for each identified asset. This evidence supports the existence and status of the assets.

Observations and Risks Identified

- Some workstations do not have up-to-date antivirus software.
- The server does not have an automated daily backup.
- Shared documents are not encrypted.
- The staff have not received recent IT security training.

Initial Recommendations

- Implement backup and recovery policies.
- Update the security software on all devices.
- Train the staff in good security practices.
- Classify the assets according to their criticality and apply appropriate controls.

Conclusion

Asset identification is an essential step to protect the critical information of the real estate agency. This report provides a solid basis for continuing with the risk analysis and the implementation of security measures.
